Instructions for use: NeuroStat Fathom

NeuroStat Fathom

Read all of this document carefully before you start. Keep it: you may need to read it again. If you have further questions, ask your doctor, pharmacist or occupational health service.

1. What NeuroStat Fathom is

NeuroStat Fathom is an ultrasound tomography system with immersion medium, class IIb. It is intended for: whole-body imaging of adults when several separate scans would otherwise be needed, under the supervision of a radiologist.

How it works

Fathom is a closed tank filled with a body-temperature fluid that carries oxygen and can be breathed. The patient is lowered in, floats without effort and lies still. A ring of transducers sends sound waves through the body from every side. From the echoes, and from the speed of sound in each tissue, Fathom builds three-dimensional maps of the whole body that compare with a whole-body MRI, and adds blood flow, bone density and body composition from the same recording. A session takes about 26 minutes, 8 of them for the scan. Nobody has to hold their breath, and the tank is quiet.

2. Before you use it

- Fathom is used only in a hospital, by a team that includes a radiologist and an anaesthetist. Resuscitation equipment stands next to the tank.
- Patients with lung or heart disease, an implant that is not labelled for immersion, or an allergy to the fluid are not scanned. A screening interview and a lung function test come before the first session.
- Most patients feel pressure in the chest and a taste of the fluid for a few minutes at the start and at the end of the scan. A cough afterwards is common and passes within an hour.
- The tank is dimly lit. A hand signal ends the scan at any time, and the fluid is drained.

3. Reporting problems

If you notice any side effect or problem, talk to your doctor, pharmacist or occupational health service. You can also report it to your national authority and to NeuroStat at safety@neurostat.com. Reporting helps provide more information on the safety of this product.
